

#	Task	Case – Study Angle	Points	Deliverable
B	Databricks Quick ETL	Ops need a one pager on “Which region sells the most units?”	15	taskB.ipynb – notebook that: 1. Mounts storage 2. Reads the CSV with spark.read.csv 3. Aggregate total Quantity by Region 4. Saves result as region_qty. parquet in a curated container

B Solution :

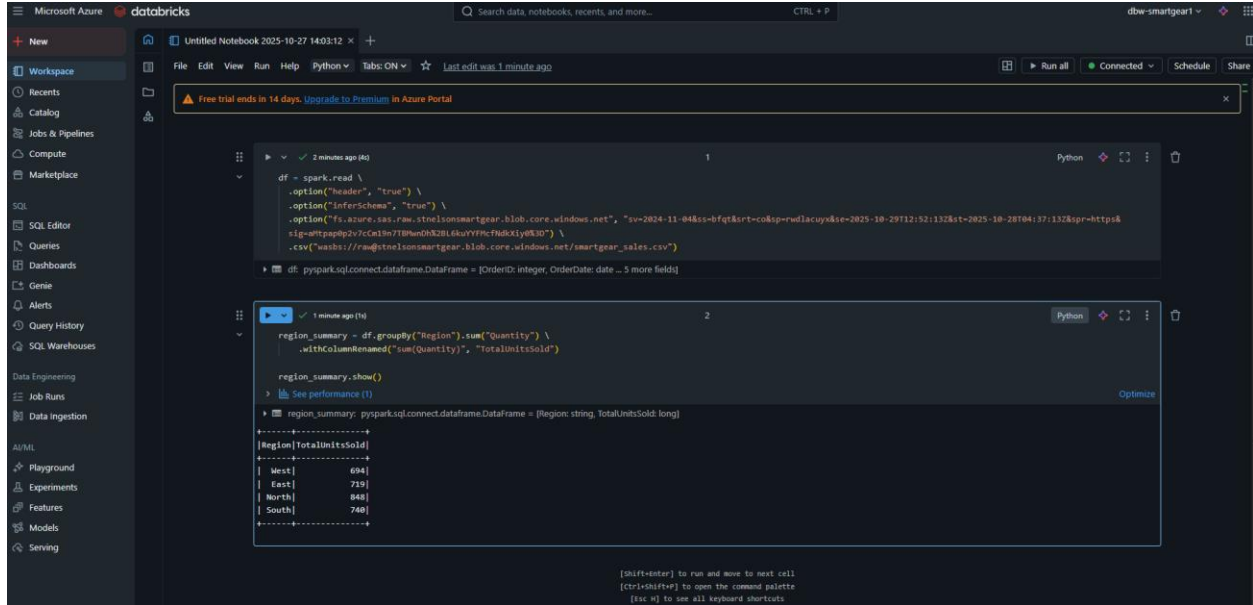

Creating and Launching Databricks workspace:

Opening Python Notebook in workspace:

- ❖ 1. Mounts storage
- ❖ 2. Reads the CSV with spark.read.csv
- ❖ 3. Aggregate total Quantity by Region

```
df = spark.read \
    .option("header", "true") \
    .option("inferSchema", "true") \
    .option("fs.azure.sas.stnelsonsmartgear.blob.core.windows.net", "sv=2024-11-04&ss=bfgt&rt=co&sp=rdlacuy&se=2025-10-29T12:52:13Z&st=2025-10-28T04:37:13Z&spr=https&sig=attpap0p2v7Ccml9n71BhmDh32L6kuYFMcfdKdXiy0K30") \
    .csv("wasbs://raw@stnelsonsmartgear.blob.core.windows.net/smartgear_sales.csv")

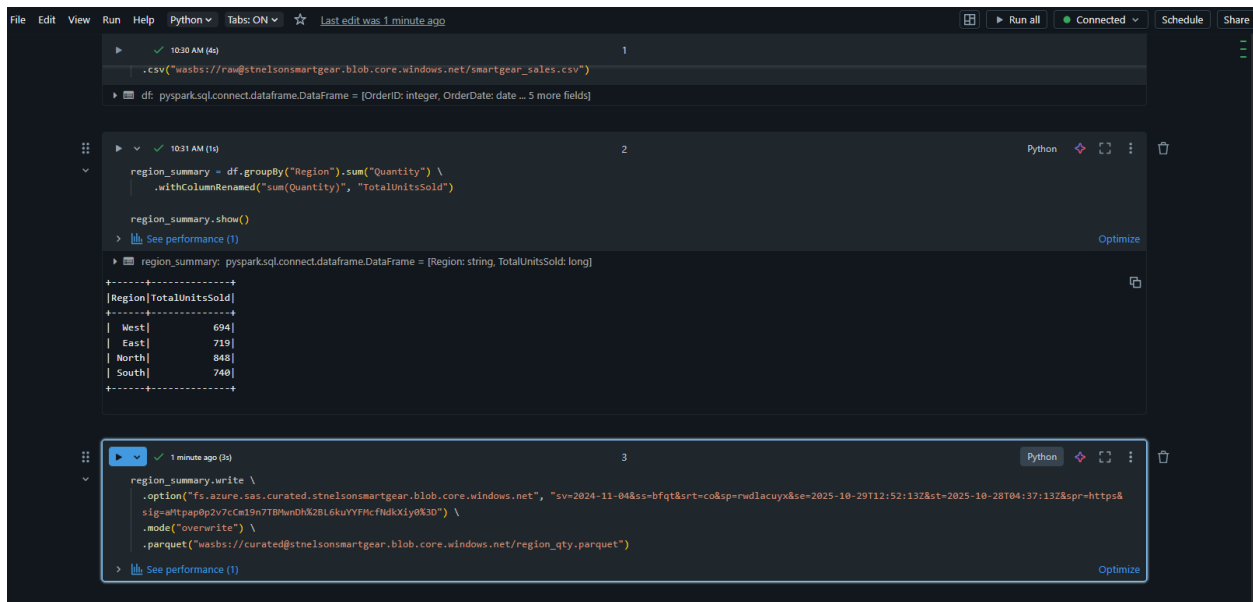

df: pyspark.sql.connect.dataframe.DataFrame = [OrderID: integer, OrderDate: date ... 5 more fields]
```

```
region_summary = df.groupBy("Region").sum("Quantity") \
    .withColumnRenamed("sum(Quantity)", "TotalUnitsSold")

region_summary.show()
```

Region	TotalUnitsSold
West	694
East	719
North	848
South	740

- ❖ 4. Saves result as region_qty.parquet in a curated container

```
region_summary = df.groupBy("Region").sum("Quantity") \
    .withColumnRenamed("sum(Quantity)", "TotalUnitsSold")

region_summary.show()
```

```
region_summary.write \
    .option("fs.azure.sas.curated.stnelsonsmartgear.blob.core.windows.net", "sv=2024-11-04&ss=bfgt&rt=co&sp=rdlacuy&se=2025-10-29T12:52:13Z&st=2025-10-28T04:37:13Z&spr=https&sig=attpap0p2v7Ccml9n71BhmDh32L6kuYFMcfdKdXiy0K30") \
    .mode("overwrite") \
    .parquet("wasbs://curated@stnelsonsmartgear.blob.core.windows.net/region_qty.parquet")
```

Task B Completed
